Title : Child undergoing a dental examination

File Name: 132_1279709-W.jpg

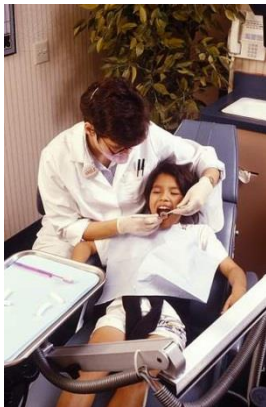

ID Number: 132_1279709

Caption : MODEL RELEASED. Dental check-up. A young boy undergoes a dental examination. He is sitting in his mother's lap and refusing to let the dentist put the dental mirror in his mouth. Children should have their teeth examined regularly, about every six months. This ensures that the dentist monitors the emergence and replacement of primary (milk) teeth and detects any other problems, such as teeth overcrowding.

Title : Dentist

File Name: 132_1282429-W.jpg

ID Number: 132_1282429

Caption : MODEL RELEASED. Dentist looking at a dental X- ray. X-rays are used to diagnose gum, bone and endodontic (inside the teeth) diseases, as well as to see cavities between the teeth that may be hidden from view. X-rays may also be used to assess the effectiveness of orthodontic treatments to realign teeth.
